DETAILED ACTION

Response to Arguments

Applicant's arguments filed 14 May 2007 have been fully considered but they are not persuasive. The amendment to claims 1, 7 and 12, to address the 112 2nd paragraph presented in the previous office action, does not address what is actually a 112 1st paragraph issue first presented in the Final Office Action filed 01 December 2006. Consequently, the Examiner correctly presents the 112 1st paragraph subject matter in the Non Final Rejection to follow.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-16 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The Specification relates the control functions performed in the mobile communication device is under the control of "An algorithm" or "the interpretation algorithm" as opposed to the amended "a protocol". The claim preamble indicates the

mobile communication device (MCD) comprises "an interpretation algorithm for interpreting acquired dat[a]" in accordance to the Specification but in contradiction to the amended claim language. With respect to the method steps performed in the MCD or portable communication device (PCD), figure 1 is in agreement with that discussed in the Specification, page 4, line 6 to page 5, line 2. They clearly teach the data control functions performed in the PCD *do not include* the method steps of "determining by a protocol of the mobile communication device, if the updated data can be stored in a single update file" and "converting data to a graphic representation in the mobile communication device". These two steps are performed by a separate (graphic presentation) device *before the graphic is read by the mobile communication device*. The method steps performed by the PCD are defined on page 5, lines 8-13 where "an algorithm of the method of the invention is applied to the stored graphic to convert or decode 30 the encoded data back to a format that is suitable for the PCD's data filling system".

Correction of the claim language with respect to the method steps of the mobile communication device with respect to the Specification, which is similarly shown in the Drawings, is required.
